FRONTEND

Frameworks: React, Next.js (ISR / SSR / CSR / SSG)

Languages: TypeScript, JavaScript, Dart, jQuery

State management: Redux, MobX, Context

Data & APIs: RTK Query, Fetch API, Axios, AJAX, REST APIs

HTML / CSS: HTML5, CSS3, SCSS, Tailwind CSS, CSS Modules, CSS-in-JS, JSX, SVG

UI libraries: Hero UI, Ant

Animation: Motion, Framer Motion

3D: Three.js, WebGL

SEO: Data-driven generation of schema, robots.txt and sitemap

PROFILE

Full-stack web developer with 3.5+ years of commercial experience.

Author of libraries with over 10,000 combined downloads per week.

Open to a range of opportunities, including roles outside my main specialization. Ready to take on new challenges.

Please contact me via Telegram or email if you have any questions.

SELECTED PROJECTS

Utility-lab.store · Solo project

A free resource for developers

A resource featuring UI components for React and Next.js.

Includes generators for patterns, backgrounds, gradients, box shadows and more, plus a broad knowledge base of CSS selectors and utilities with examples and implementations.

The project is actively being developed.

Implemented dynamic, timely data updates with versioning and change tracking for browser compatibility information. A dedicated manager processes, compares and reduces data from public APIs.

Two Peters Winery

Winery website and CRM dashboard

Hybrid SSR / ISR, SEO-oriented website built with Next.js and PHP:

- Geo manager for retail locations, purchasing, stock availability, analytics, statistics and integrations. Includes filters for locations, products, events and tours; around 90% of website content can be edited through the dashboard.
- Responsive layouts for different devices and screen sizes.

SPA dashboard with custom authentication and a user account:

- Authentication, role and permission management, controlling access to data and user interactions according to assigned roles and permissions.
- Content builder for events, locations and products; editing website visuals and content; reviews, notifications and release notes.
- Server-side statistics for unique visits, repeat visits and visitor return rates, displayed in charts.

TOOLING & PACKAGE DEVELOPMENT

Tooling & configuration: ESLint, Prettier, npm scripts, package.json, tsconfig, environment variables, path aliases, module resolution.

Package development: npm packages, publishing, semantic versioning, package exports, TypeScript declarations.

BACKEND

Backend: NestJS, PHP (clean code / DTO)

Languages: TypeScript, JavaScript

Documentation: Technical and API documentation, Swagger / OpenAPI, README, npm package documentation.

Databases & data: PostgreSQL, MySQL, Redis, JSON

DELIVERY & INFRASTRUCTURE

Version control: Git, GitHub, push / pull, pull requests, branching

CI/CD: GitHub Actions, automated build and deployment pipelines

Package management: npm, package.json, publishing, versioning and maintenance

Infrastructure: VPS, Linux, Nginx, PM2, Docker, SSL, DNS, Vercel, production deployment

LLM & AI AGENTS

Implementation and configuration of AI agents. Different approaches include content scanners with custom data-selection configurations and processing for specific datasets.

Implementation details

- Implemented a geo-presence pattern: an object's state can be managed using the user's geolocation, a venue's opening hours, an event's status and other context. Used a cleaned FIAS database as a lightweight table containing only the fields needed for reliable geo-management.
- Implemented interactive release notes with inline-text formatting and a minimalist admin editor.
- Built a custom cart supporting adding, removing, replacing and comparing items; delivery calculations; loyalty-card pricing; maps and calculators; order management and order history. The purchasing module is currently on hold because the client cannot sell alcohol remotely under the applicable legislation. The functionality can be enabled from a single control in the admin panel.

Full-stack dashboard & website · Seafood

SEO-friendly responsive online store for fresh fish

Development of an online store for seafood products.

Development of the accompanying dashboard / admin panel.

Full-stack dashboard & online store · Smoking accessories

PHP, JavaScript, CSS · Built independently with native technologies

Built an online store for smoking devices and accessories using native JavaScript, HTML and CSS, with a PHP backend.

Developed a dashboard for inventory intake, product cards, filter creation, data exports and third-party API integrations.

Implemented a guest review system based on browser fingerprinting, with suspicious-pattern filtering and moderation workflows involving bots, email and a live stream in the admin panel. Backend: PHP and SQL.
